

ANIL GÜL

Systems & Hardware Specialist | Java Developer

Malatya, Türkiye | Open to remote work | +90 536 666 26 26 | anilgul2002@gmail.com
Portfolio: anilg12.github.io | GitHub: github.com/anilg12 | LinkedIn: linkedin.com/in/anilg12

PROFESSIONAL SUMMARY

A systems- and infrastructure-focused IT specialist with command of the full technology stack, from bare-metal hardware to the service layer. Hands-on across numerous systems with component-level hardware diagnostics and repair, multi-OS administration (Windows, Linux, macOS), custom Windows image engineering with NTLite, and network configuration in Cisco environments. Complements this infrastructure foundation end to end with PowerShell system automation, virtualization, and performance tuning, plus desktop application development in Java, C# / .NET, and Python, system tooling, and application packaging/deployment (Jlink & Jpackage / MSI); built an electronic-warfare (EW) RF spectrum simulator in Java 21. A Management Information Systems graduate (2026) targeting a Systems Engineer / Junior Java Developer role.

TECHNICAL SKILLS

Systems Administration & Infrastructure: Windows, Linux (Ubuntu) & macOS administration; multi-OS configuration; custom Windows image engineering (NTLite) with driver integration, unattended installation, and telemetry reduction; Windows Registry; virtualization; system performance & boot-time optimization; embedded & legacy systems (Raspberry Pi).

Hardware Diagnostics & Repair: Component-level fault diagnosis & repair (motherboard, CPU, GPU, memory); thermal management & cooling; hardware stress testing & benchmarking; hardware-software compatibility analysis.

Networking & Security: TCP/IP & network fundamentals; IP addressing & VLANs; routing & switching, routing protocols (RIP, EIGRP, OSPF); Cisco IOS; network design & analysis in Cisco Packet Tracer and Wireshark; offensive-security (Red Team) concepts; security best practices.

Automation & Scripting: Post-install configuration automation with PowerShell; Windows service/telemetry hardening; CI/CD (GitHub Actions); version control with Git & GitHub.

Application Development & Packaging: Java / JavaFX (Java 21, OOP, Maven), C# / .NET (WPF, Win32 API), Python (Flet), SQL / SQLite; REST API; layered architecture & relational database design; self-contained Windows installers (MSI) via Jlink + Jpackage; HTML, CSS, JavaScript. (Microservices architecture: introductory level, actively developing.)

PROFESSIONAL EXPERIENCE

Systems, Hardware & Network Engineering - Applied Practice | 2023 - Present

Independent | Malatya, Türkiye

- Restored numerous legacy and current laptops and desktops to working order by performing component-level fault diagnosis (motherboard, thermal, memory) and resolving hardware-software compatibility issues.
- Substantially cut boot time and resource usage on low-spec machines by engineering custom Windows 10 and Windows 11 images in NTLite, stripped of unnecessary services, telemetry, and components, automating post-install tuning with PowerShell, and additionally preparing streamlined Ubuntu (Linux) installations; documented the configuration on GitHub.
- Validated system stability under sustained load through hardware stress testing and thermal analysis, and configured Windows, Linux, and macOS environments end to end, including legacy and embedded/Raspberry Pi targets.
- Reinforced networking fundamentals hands-on by designing and simulating multi-router topologies with RIP, EIGRP, and OSPF in Cisco Packet Tracer and analyzing traffic in Wireshark.

Freelance Web Developer - Client Portfolio Website | Feb 2026 - Jun 2026

Self-employed | Remote | HTML, CSS, JavaScript, GitHub Pages

- Delivered a bilingual (TR/EN) portfolio website for a cybersecurity specialist, now live on GitHub Pages, by rebuilding a Framer template export into hand-maintained HTML, CSS, and JavaScript.
- Eliminated content-corruption bugs caused by the template's client-side hydration across all major browsers by engineering a MutationObserver-based JavaScript recovery layer.
- Served two language audiences from a single codebase by implementing full TR/EN switching, dark/light theming, and language-matched CV downloads.

PROJECTS

SPEKTRA - Electronic Warfare RF Spectrum Simulator | 2026

Java 21, JavaFX 21, Maven, Jlink, Jpackage | github.com/anilg12/Spektra

- Delivered v2.0.0 of an electronic-warfare simulation platform with a pure-Java physics core that pits a frequency-hopping (FHSS) tactical radio against two simultaneous enemy jammers (barrage / spot / sweep / follower) over a real-time RF spectrum analyzer and waterfall display.
- Modeled signal, noise, and interference in the linear power domain and numerically validated SJNR and packet-delivery-ratio (PDR) metrics; against a follower jammer, a fast-hopping link held ~98% PDR while a slow-hopping link dropped to ~31%, reproducing expected EW doctrine.
- Decoupled the physics core from JavaFX as a UI-independent, headless-testable layer; built 60 FPS Canvas-based real-time rendering, VHF/UHF/L/ISM 2.4 GHz band presets, ready-made threat scenarios, .spx scenario save/load, and PNG report export.
- Packaged the app for distribution with a slimmed custom runtime via Jlink and a self-contained Windows installer (MSI) via Jpackage that requires no Java on the target, with Start-menu and Control-Panel integration.

StockFlow - Inventory Management System (Capstone Project) | 2025 - 2026

Python, Flet, SQLite | github.com/anilg12/StockFlow

- Built a full-stack inventory management engine, desktop-first and then extended to the web, with a service-layer architecture and offline-capable local persistence.
- Unified inventory, sales receipts, customer account balances, customer interaction history, and 6 report types (CSV export) on a 9-table relational SQLite schema; protected multi-step writes with atomic transactions and recorded every stock change in an audit trail.
- Stored passwords with PBKDF2-SHA256 (120,000 iterations, per-record salt), used the SQLite backup API for backups, and enforced business rules such as negative-stock prevention and unique codes in a UI-independent service layer.
- Developed as the senior-year capstone at Kapadokya University and adopted into the university's own infrastructure.

Oblivion Uninstaller - Windows System-Maintenance Application | 2026

C#, .NET, WPF, Win32 API | github.com/anilg12/Oblivion-Uninstaller

- Shipped v1.0.0 of a six-module Windows system-maintenance tool (registry and filesystem residue cleanup, targeted "Hunter Mode" removal, junk-file cleaning, startup management, bloatware removal, and browser-extension management), packaged as a distributable installer.
- Reduced every release to a single automated step by building a GitHub Actions CI/CD pipeline that compiles the app and packages the Windows installer.
- Protected users against irreversible changes by automating a System Restore checkpoint before every destructive operation across all six modules (backup-and-recovery approach).

win11-ltsc-lite - Lightweight Windows 11 Enterprise LTSC Configuration | 2026

NtLite, Windows 11 Enterprise LTSC 2024 | github.com/anilg12/win11-ltsc-lite

- Removed 94 components and reduced telemetry with NtLite on Windows 11 Enterprise LTSC 2024 (Build 26100), cutting idle RAM usage to 1.8 GB (measured on a 4 GB virtual machine) while keeping Windows Update and Windows Firewall intact for security updates through 2034.
- Published a reproducible preset.xml with SHA-256 integrity verification that recreates the same build from an official Microsoft image, without redistributing the ISO, in line with licensing terms.

Focus Manager RPG - Gamified Desktop Application | 2025

Java, JavaFX | github.com/anilg12/Odak-Menajeri-RPG

- Turned daily task management into a measurable progression loop by building an offline JavaFX desktop app with +50 XP per completed task, four-tier ranking (Novice, Diligent, Master, Legend), and Timer API-based reminders.

EDUCATION

Kapadokya University - Nevşehir, Türkiye | Sep 2022 - Jul 2026 (Graduated)

Bachelor's Degree in Management Information Systems

Relevant coursework: Operating Systems, Database Systems, Data Structures, Networking, Web Programming, C++, Python. Capstone: StockFlow (adopted into university infrastructure).

Activities: Board Member, Artificial Intelligence Community; Cisco Networking Academy Software Developer Course.

CERTIFICATIONS

Certified Red Team Operations Management (CRTOM) - Red Team Leaders, 2026

IT Essentials: PC Hardware and Software (70 hours) - Cisco Networking Academy / Kapadokya University, 2023

Computer Networks - Introduction to Packet Tracer (8 hours) - Cisco Networking Academy / Kapadokya University, 2023

PCAP: Programming Essentials in Python - Cisco Networking Academy, 2024

JavaScript Essentials 2 - Cisco Networking Academy / JS Institute, 2026

HTML Essentials - Cisco Networking Academy / JS Institute, 2026

CSS Essentials - Cisco Networking Academy / JS Institute, 2026

Advanced Java 101 - Turkcell Akademi, 2026

Advanced Java 201 - Turkcell Akademi, 2026

Advanced Java 301 - Turkcell Akademi, 2026

System Design and Real Case Architecture - Turkcell Akademi, 2026

Blockchain Technologies - Turkcell Akademi, 2026

AI-Assisted Backend: API Development with Copilot & FastAPI - Turkcell Akademi, 2026

Prompt Engineering - Turkcell Akademi, 2026

Mikroservice Core - Udemy, 2025

PROFESSIONAL DEVELOPMENT

Introduction to AI & Generative AI Tools; CV Writing & Interview Techniques; Work Management & Empathy Skills; Corporate Sustainability & Waste Management - Kapadokya University, 2025-2026.

LANGUAGES

Turkish: Native | English: A2 (general, CEFR); professional English: good

ADDITIONAL INFORMATION

Military Service: Deferred until 1 January 2031

Work Preference: Full-time; on-site, hybrid, or remote in Malatya; remote for all other locations.
