

ANIL GÜL

Systems & Hardware Specialist | Java Developer

Malatya, Türkiye • +90 536 666 26 26 • anilgul2002@gmail.com

Portfolio: anilg12.github.io • GitHub: github.com/anilg12 • LinkedIn: linkedin.com/in/anil-gül-753417249

Portfolio

PROFESSIONAL SUMMARY

A systems- and infrastructure-focused IT specialist with command of the full technology stack, from bare-metal hardware to the service layer. Hands-on across numerous systems with component-level hardware diagnostics and repair, multi-OS administration (Windows, Linux, macOS), custom Windows image engineering with NTLite, and network configuration in Cisco environments. Complements this infrastructure foundation end to end with PowerShell system automation, virtualization, and performance tuning, plus desktop application development, system tooling, and application packaging/deployment (jlink & jpackage / MSI). A Management Information Systems graduate (2026) targeting a Systems Engineer / Junior Java Developer role.

CORE COMPETENCIES

Systems Administration & Infrastructure: Windows, Linux (Ubuntu) & macOS administration; multi-OS configuration; custom Windows image engineering (NTLite); virtualization; system performance & boot-time optimization; embedded & legacy systems (Raspberry Pi).

Hardware Diagnostics & Repair: Component-level fault diagnosis & repair (motherboard, CPU, GPU, memory); thermal management & cooling; hardware stress testing & benchmarking; hardware-software compatibility analysis.

Networking & Security: TCP/IP & network fundamentals; routing protocols (RIP, EIGRP, OSPF); network design & analysis in Cisco Packet Tracer and Wireshark; offensive-security (Red Team) concepts; security best practices.

Automation & Scripting: Post-install configuration automation with PowerShell; Windows service/telemetry hardening; CI/CD (GitHub Actions); version control with Git & GitHub.

Application Development & Packaging: Java / JavaFX, Python; self-contained Windows installers (MSI) via jlink + jpackage; HTML, CSS, JavaScript. (Microservices architecture: introductory level, actively developing.)

PROFESSIONAL EXPERIENCE & PROJECTS

Systems, Hardware & Network Engineering — Applied Practice

2023 – Present

- Restored numerous legacy and current laptops and desktops to working order by performing component-level fault diagnosis (motherboard, thermal, memory) and resolving hardware-software compatibility issues.
- Substantially cut boot time and resource usage on low-spec machines by engineering custom Windows 10 and Windows 11 images in NTLite — stripped of unnecessary services, telemetry, and components — automating post-install tuning with PowerShell, and additionally preparing streamlined Ubuntu (Linux) installations; documented the configuration on GitHub.
- Validated system stability under sustained load through hardware stress testing and thermal analysis, and configured Windows, Linux, and macOS environments end to end, including legacy and embedded/Raspberry Pi targets.
- Reinforced networking fundamentals hands-on by designing and simulating multi-router topologies with RIP, EIGRP, and OSPF in Cisco Packet Tracer and analyzing traffic in Wireshark.

SPEKTRA — Electronic Warfare RF Spectrum Simulator

Java 21 • JavaFX 21 • 2026 • github.com/anilg12/SPEKTRA

- Delivered v2.0.0 of an electronic-warfare simulation platform with a pure-Java physics core that pits a frequency-hopping (FHSS) tactical radio against two simultaneous enemy jammers (barrage / spot / sweep / follower) over a real-time RF spectrum analyzer and waterfall display.
- Modeled signal, noise, and interference in the linear power domain and numerically validated SJNR and packet-delivery-ratio (PDR) metrics; against a follower jammer, a fast-hopping link held ~98% PDR while a slow-hopping link dropped to ~31%, reproducing expected EW doctrine.
- Packaged the app for distribution with a slimmed custom runtime via jlink and a self-contained Windows installer (MSI) via jpackage that requires no Java on the target, with Start-menu and Control-Panel integration.

StockFlow — Inventory Management System (Capstone Project)

Python • Flet • SQLite • 2026 • github.com/anilg12/StockFlow

- Built a full-stack inventory management engine — desktop-first, then extended to the web — with a service-layer architecture and offline-capable local persistence.
- Developed as the senior-year capstone at Kapadokya University and adopted into the university's own infrastructure.

Oblivion Uninstaller — Windows System-Maintenance Application

C# • .NET • WPF • Win32 API • 2026 • github.com/anilg12/Oblivion-Uninstaller

- Shipped v1.0.0 of a six-module Windows system-maintenance tool — registry and filesystem residue cleanup, targeted "Hunter Mode" removal, junk-file cleaning, startup management, bloatware removal, and browser-extension management — packaged as a distributable installer.
- Reduced every release to a single automated step by building a GitHub Actions CI/CD pipeline that compiles the app and packages the Windows installer.
- Protected users against irreversible changes by automating a System Restore checkpoint before every destructive operation across all six modules (backup-and-recovery approach).

Freelance Web Developer — Client Portfolio Website

HTML • CSS • JavaScript • GitHub Pages • 2026

- Delivered a bilingual (TR/EN) portfolio website for a cybersecurity specialist, now live on GitHub Pages, by rebuilding a Framer template export into hand-maintained HTML, CSS, and JavaScript.
- Eliminated content-corruption bugs caused by the template's client-side hydration across all major browsers by engineering a MutationObserver-based JavaScript recovery layer.
- Served two language audiences from a single codebase by implementing full TR/EN switching, dark/light theming, and language-matched CV downloads.

Focus Manager RPG — Gamified Desktop Application

Java • JavaFX • 2025 • github.com/anilg12/Odak-Menajeri-RPG

- Turned daily task management into a measurable progression loop by building an offline JavaFX desktop app with +50 XP per completed task and four-tier ranking (Novice → Diligent → Master → Legend).

EDUCATION

Kapadokya University — Nevşehir, Türkiye | 2022 – 2026 (Graduated)

Bachelor's Degree in Management Information Systems

Relevant coursework: Operating Systems, Database Systems, Networking, Web Programming, C++, Python. Capstone: StockFlow (adopted into university infrastructure).

CERTIFICATIONS

- Certified Red Team Operations Management (CRTOM) — Red Team Leaders, 2026
- IT Essentials: PC Hardware and Software (70 hours) — Cisco Networking Academy / Kapadokya University, 2023
- Computer Networks – Introduction to Packet Tracer (8 hours) — Cisco Networking Academy / Kapadokya University, 2023
- JavaScript Essentials 2 — Cisco Networking Academy / JS Institute, 2026
- HTML Essentials — Cisco Networking Academy / JS Institute, 2026
- CSS Essentials — Cisco Networking Academy / JS Institute, 2026

PROFESSIONAL DEVELOPMENT

Introduction to AI & Generative AI Tools; CV Writing & Interview Techniques; Work Management & Empathy Skills; Corporate Sustainability & Waste Management — Kapadokya University, 2025–2026.
